UNIVERSITY OF GEORGIA

Community Engagement (CE)

This program supports community-university research partnerships and seeks input from community partners to implement health research into university research. CE works to increase health research in community settings that is responsive to the needs and strengths of the community by translating research from a scientist-subject interaction to a collaborative partnership. Program resources are available to and connect existing academic community research programs from Morehouse School of Medicine, Emory University, the Georgia Institute of Technology, and the University of Georgia, while providing training for research scholars in the principles of community-engaged research.

Available Resources

- **Dissemination** of academic and clinical research findings to the community

- **Community health workers** delivering health promotion strategies

- A **course** on *Community Engagement in Clinical Research* for clinician scientists

- **Workshops** strengthening capacities in community-engaged research, grant writing, program planning, assessment, and partnerships for community-based organizations and academics

- **Grant program** for proposals aimed at partnership-based health projects that involve collaboration between a community-based organization and an academic researcher

- A statewide biennial **forum**, advancing community-engaged research, partnerships, practice, and population health

- Three-tier system of **community engagement support**: concept/research consultations, community-engaged research committee assignment, and grant partnership
